Peachblow (Late, solid peachblow pink)	1.00

Over 100 fifty cent varieties and a lot of cheaper ones.

We have best success with fall planting, beginning September first, if that date does not come on Sunday. Never plant peonies in soil where peonies have grown.

ROTATION IS ABSOLUTELY ESSENTIAL

We always clean summer fallow at least one year in preparation for peonies and leave nothing in or on the ground that can decay.

If you use winter mulch rake it all off before the plants begin to come up in the spring.

Never plant a root bent into an unnatural position.

Let the highest bud be the length of your thumb below the surface of the ground.
